

“The real-time communication tool for educators”

What’s New in Comotiv® Version 5.0

In response to customer feedback, we have made some exciting improvements to Comotiv Systems!

As you will see when you log in to Comotiv, we have a new look and design that will make using the application easier than ever! The next time you launch the application, your version of Comotiv is set to update automatically to this new release.

Comotiv version 5.0 Release Highlights include:

- A redesigned Collaboration Room to allow for integrated conferences and desktop sharing to occur in the Collaboration Room itself, alleviating the need for pop-ups or switching windows.
- Audio/Video Conferences can now be started with just one click of a button, from within the Collaboration Room.
- Presentation Conferences now allow for more than one presenter, as well as the ability for the presenter to privately open or close the floor to individual or all attendee questions or comments.
- Desktop sharing has been enhanced by giving members more control over collaboration with other members, as well as more options for viewing a shared desktop.
- Quicker access to the most-used features of Comotiv, including starting and changing preferences of Audio/Video conferences, file management, and more.
- Expanded user preferences options that can be accessed easily from the Collaboration Room or dashboard.

More information on these enhancements can be found in the Comotiv Help file, the Comotiv QuickStart Tutorial, and the *Comotiv User Guide*.
